

Using ASP to Send a Wireless Text Message

| | |
|-----------------------|------------------------|
| Address | {value_address} |
| Contact Person | {value_contact_person} |
| Mobile Number | {value_mobile_number} |
| Email | {value_email} |

Sending an SMS message via e-mail requires the acceptance of several hidden flaws. This article shows how to avoid these complications by sending a wireless text-message through the use of ASP. Covers two different solutions: using SMTP, and using Third-party solutions such as shrink-wrapped software and application service provider (ASP) gateways.
