

# Using XSLT for content management

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

This is the first installment of "Working XML", a column with companion project code that demonstrates the evolution of full-fledged XML applications. This column introduces XM (XSLT Make), a simple and affordable Web publishing content-management solution that takes advantage of XML and XSLT. Code samples show the development of a wrapper for the XSLT to make it easy for a nonprogrammer to use. XM project code is available by link.
