

# Visual Code-Generator

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Visual Code-Generator allows you to generate code from simple ASP style scripts. Like ASP, JSP or PHP, Visual Code-Generator acts as a preprocessor, but instead of generating HTML, Visual Code-Generator outputs the source code for your project using your chosen platform and language, be that C++, .NET, Java, J2EE, Visual Basic, SQL, Perl, COBOL, or anything else. Visual Code-Generator maximizes reuse in your project, dramatically reducing the development time and ensuring reliability and consistency. Visual Code-Generator excels in developing projects containing large numbers of repetitive entities such as Business Objects, Database Tables or XML elements. Visual Code-Generator can be used to automate the coding of all of these tasks and many more. Samples include n-tier, web and database applications using ASP, VB, XML, SQL Server, EJB, JSP and much more.
