Voynex WMS Commander is a set of tools to manage WMS and its publishing points. WMS Commander has two components: command line utility and CGI script. Depending on the tool used commands can be executed locally or remotely via DCOM / RPC or HTTP / HTTPS. Features WMS Commander tools execute the following commands: 1) Start / Stop an existing publishing point by name; 2) Create a publishing point and set parameters; 3) Set / Modify publishing point's properties; 4) Clone an existing publishing point; 5) Remove a publishing point; 6) Enable / Disable anonymous authentication and set user credentials; 7) Enable /disable multicast and configure its parameters; 8) Start / stop archiving; 9) Create a multicast announcement (.nsc) file;
