Web Development with JavaServer Pages will teach you how to create dynamic content-personalized, customized, and up-to-the minute content-a key ingredient of site development on the World Wide Web today. JavaServer Pages (JSP) is a new server-side Java technology for generating dynamic content in web pages and other on-line applications. This book covers all aspects of JSP development, as well as comparisons to similar dynamic content systems such as CGI, Active Server Pages, Cold Fusion, and PHP. It clearly demonstrates the advantages offered by JSP as a full-featured, cross-platform, vendor-neutral technology for dynamic content generation.
