Mobile Number	{value_mobile_number}
Email	{value_email}

Give web-access to files, directories. Show folders and files in a tree applet that is collapsible, dynamic, and configurable. Access your files from anywhere on the web. The Web File Browser ASP script automatically detects changes in the files or directories, with no intervention from the site administrator. The next time the tree is loaded by a new user, or reloaded by the same user, it will show the new structure. Filter files by type (icon by type.) Works with local or networked drives.
