web.framework is an MVC framework for PHP5. It features actions and action-chains, the ability to call to other actions or action-chains from an action-chain, pre- and post-actions with exceptions, validators for simple check forms, support for DB configuration in framework configuration, support for template systems (such as web.template and Smarty), a router for making URLs nice-looking, tokens, authorization frames, AJAX, client-side validation, advanced validators, good integration with web.template and more.
