Email	{value_email}

The Organization Chart program is an application used to create corporate organizational charts based on personnel database tables. In each organization, an HR table contains information on existing personnel. Organization Chart can connect to any HR table. You can define two fields as a child id, an employee id, or any other id contained in the table as the unique identifier of the record. For example, you can also use a parent id, supervisor id, or any other that identifies the supervisor of that particular individual. The Organization Chart program can also create tree format charts based on the table attached to it.
