Web Page Update Check

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This class allows you to check to see if a particular web page has been updated recently. It doesn't show what the changes were, just the fact that it's been altered in some way since you last checked the site. Great if you want to provide a quick indication to users that some remote page has been updated.
