Mobile Number	{value_mobile_number}
Email	{value_email}

This Servlet allows groups of users to easily share and manage a central repository of files and folders by using any standard Web browser. Can be used as: a repository for team projects; a substitute for FTP; to create private download areas. It allows performing all file management operations: - upload and download. - deletion, copy, move and rename of files and folders. - adding notes to the files. - setting permissions for groups and folders. - sending notifications to groups of users. It has been tested on: - J2EE engines like: Tomcat, JBoss, Resin ... - Databases like: Oracle , SQL Server, MySQL, SAP DB It supports localization: english, spanish, german and more to come. The source code is available.
