

webFile

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

webFile allows you to distribute files without ever showing the path to the file. Your files are fully protected, and may only be accessed by our script. This is great for shareware developers who wish to offer the full version of an application on their website. webFile allows you to create new users with passwords, and limit the number of times each user can download a specific file.
