WebForum is a servlet which can be used to build professionnal web boards with Web forms for administration. It is multilingual and require only a small configuration files to setup. The servlet caches all disk access for optimal performance and is fully threaded. It uses sesssion tracking throughout and will open a session will all registrered visitors dynamically generating pages according to the identity of the visitor. Through CSS, the look and feel of the HTML pages can be tailored easily to meet your needs but it doesn't yet has a full template mechanism. It also includes a Java 2 applet (sources included) which is fully compatible with the forum (so you can browser either through the Java applet or through HTML). It requires Java servlet compatibility (tested with Java Servlet Kit 2.0 and above) and Java 1.1 (tested with both Linux and Windows).
