webmask URL redirection system

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The webmask URL redirection system is a low cpu usage and low diskspace usage url redirection script. You can use this script to start your own url redirection service. The script uses so little system resources that you can setup 100's of different services on the same server, even on the same virtual account. The script is extremely easy to configure and modules can be added to allow automatic submission to search engines and to create your own directory.
