

WebOS: Website Operating system

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

WebOS was developed because of the need for an easy to edit, install and administrate content management system in ColdFusion. The Company I was working for had an aging 'Legacy'-based CMS, which was at the best, difficult if not tedious to install, update and modify. WebOS solves all of the tediousness and difficulties in running and administrating a Dynamic ColdFusion CMS. With an easy-to-use Administration Panel, anyone with a little knowledge can use and administrate WebOS. WebOS is a module-based CMS with a template structure used to change the site layout easily without extensive HTML knowledge.
