

Website Abstraction Encrypted Password Generator

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This program dynamically encrypts the password to a page (differently each time) before saving it, making it a lot harder for foul-minded users to break in. In addition, the program does not simply take the surfer to the file he/she enters as the password. Instead, it navigates to a page only if the surfer correctly enters the password. Invalid passwords will result in an "invalid password" alert.
