The WebSplitter is an ASP.NET splitter control allowing you to subdivide sections of the Web page so that your users can resize or even collapse them. Simulating the intuitive splitter of user interface is found in many modern rich client applications, it gives your users greater splitter control over the layout of their workspace. This splitter control also helps to avoid HTML frames usage for information splitting in your applications for delivering compartmentalized sections of information. WebSplitter for ASP.NET is a split container control which allows creating interface layouts with resizable panels. It adds flexible layouts to ASP.NET applications including horizontal/vertical splits, resizable scrollable, collapsible and even ASP.NET AJAX panels, client-side interactivity, and much more. Main features: 1. Orientation - Orient your splitter bar horizontally or vertically. 2. Resizing Behavior - You can make the content pane resize in real time. 3. Content Panes.
