Email	{value_email}

WebSprockets Runtime is an SQL database driven Website framework for PHP that provides a runtime environment for rapid prototyping of complex relational database driven dynamic Websites with user security. Each table in the database is a class, and several classtypes are supported including news posting, a navigation bar, a message board, a chat room, Webmail, and generic text. Each field in the table is a property, and many field types are provided, including text, email addresses, dates, currency, barcodes, passwords, upload files, and table relationships.
