Aiming to increase cross-selling, Magento store owners have to look at a few months of access logs, find sessions where website visitors viewed more than one product, and collect statistics about pairs of products which were viewed in the same session. The Who Viewed This Also Viewed extension for Magento is the simplest way you can turn a big manual job into fast and exact automated process. The Who Viewed This Also Viewed module from aheadWorks Co. allows displaying a set of additional products which was also viewed by other customers while visiting the same product page. This Magento extension helps you move the cross-selling in your store to a new more efficient level and make your sales rise up.
