Wikiwig is a free WYSIWYG-WIKI. It combines shared-working possibilities of Wikis with a Wysiwyg user-friendly interface (HtmlArea3). You don't need to know any wiki-specific syntax anymore to create and modify pages : simply design your page like in a word-processor. Hot features : image manager (allowing upload, rotation, resizecrop), visual browsing / Conflict prevention system (lock) to avoid 2 authors to edit same page at the same time, alert system to stay informed when major changes appear on a page you decided to be and much more
