Email	{value_email}

WMJ is a PHP based jukebox for playing music on the local stereo. It uses the amp mp3 player. It creates a database of all your mp3 files with detailed id3 information. The database is used to fill the playlist. The jukebox can play random or random by GENRE. It has an advanced search function. Lots of nifty features.

0.1-devel1 update: This version had some minor bugfixes / layout changes. Overall, it should be better and more stable.
