Working With Time Zones in PHP

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This tutorial explains how to handle converting times to different time zones using the DateTime and DateTimeZone classes provided by PHP 5.2.0+. It will show how to collect the time zone in the Area/Location format and how to use it for converting to and from that zone. This is useful for online applications that will be used by users in many locations.
