

Writing Apache Modules with Perl and C

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This guide to Web programming teaches you how to extend the capabilities of the Apache Web server. It explains the design of Apache, mod_perl, and the Apache API, then demonstrates how to use them to rewrite CGI scripts, filter HTML documents on the server-side, enhance server log functionality, convert file formats on the fly, and more.
