

# Writing Form Data to Text Files

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

This sample of JSP file, first handles all posted data from a web form and write to a text file. We have used Tomcat Server to run our sample code. You could easily edit the source code to use in your application.
