

WWW FTP Client

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This WWW FTP Client provides a way to access FTP sites via WWW interface. Using it you can do almost everything you can do with a casual FTP client: browse directory tree, rename and delete files and directories, upload files etc. The main goal of this script is to provide access to FTP servers if you're behind a firewall not allowing FTP connections. So you can install it on a remote site, access by your browser and connect to the FTP servers where you get accounts.
