Email	{value_email}

This is a CGI program to keep record of the raw hits of a web page. It generates a GIF image of the number of hits and returns to the browser as an in-lined image. The program also has a run-time option not to show the digit images, this way the hits can be kept without displaying it. The hits can be monitored without incrementing from a separate page as well. The program can also display time and date of any timezone. It has a option to countdown to a specific date (past or future). Almost all of the features are run-time options.
