wysiwyg_web_edit is a web-based WYSIWYG HTML editor designed to generate HTML code directly from a browser (IE or NS) in a WYSIWYG view, so you don't need to know HTML to use it. You have a wide variety of functionalities as create links, insert images, manage tables and lists, undo and redo, cut-copy-paste (OLE compatibles so you can paste datasheets and formatted text) and it can be easily embedded in your web pages. It uses an ActiveX control, and in the case of Netscape, a plug-in (to run ActiveX on NS). Once you are finished you can easily submit the content to a CGI and store it in a Database. The application is available in three languages (english, spanish and cathalan).The wysiwyg_web_edit is written in HTML and JavaScript, and it uses PHP as a server-side language.
