Xedit for Java is a tool for assisting in migration from a content editing environment for mainframe (VM/CMS) 3270 terminals to an e-business environment. Xedit for Java provides a Java applet that simulates the XEDIT editor of VM/CMS in a modern e-business environment. Xedit for Java supports all the traditional editing commands of XEDIT, as well as some enhancements such as "cut-and-paste" and "undo" features and the full Unicode character set.
