<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

The first two installments of this column provided an overview of working with XML in Python. In the year since those initial writings, however, the state of XML tools for Python has advanced significantly. Unfortunately, most of these advances have not been backwards compatible. This special installment article revisits the author's previous discussion of XML tools, and provides up-to-date code samples.
