

# XTemplate.Net

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

XTemplate.Net is an ASP.Net library much like PHP XTemplate. XTemplate.Net is NOT a port of the popular PHP XTemplate but rather a .Net version of a template engine much like it. Templates that work for PHP XTemplate will work with XTemplate.Net and vice versa. This allows site designers to design while developers, develop, because XTemplate.Net features separation of Code and Design with a lot more flexibility than MasterPages in ASP.Net. Templates made with XTemplate.Net can be nested into unlimited levels leaving your design modular and easy to modify. Using XTemplate.Net is simple and powerful. So what do you have to loose? Try XTemplate.Net today!
