YAAPG (Yet Another but not just Any Playlist Generator) is a GPL Perl script to generate a random .mp3 playlist for your music player. Its features are: \* Random playlist generation of .mp3 music files into a convenient .m3u file found in /albums of the YAAPG folder. \* Handles fixed as well as VBR .mp3's. \* Deep nesting of music files is supported. No need for playlist preprocessing. \* No song repeats per playlist. Repeats on successive runs user controlled with history file function. \* Easy to configure readable text file. \* Command line overrides of .rc file for on-the-fly playlist customization. \* Playlist playtime user configured upon program run with keyboard input. \* Program feedback in english, not "cryptic geek". \* Friendly and informative crash handling. You can preview the README file to see if it's something to fit your needs. YAAPG depends on the Perl Mp3::Info module. If you don't have it, you can download it from me.
