Zambro is a simple and light web browser, written in Java 5 and using the Swing framework. It encounters many features, where the most important are: remote and local browsing, bookmarks support (where bookmarks can be exported in a HTML document), HTML code viewer/editor, search on the web (using the most famous search engines like Google, Yahoo! and MSN Search), minimalistic back/forward memory for visited sites' history, hideable panels, and per-user customizable settings. Other features could be easily added.
