

Zebra_Datepicker, a lightweight date picker plugin for jQuery

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Zebra_Datepicker is a small, compact and highly configurable date picker plugin for jQuery. Features: it is small - it weights around 11KB minified; it's compact - unlike most date pickers, this one is one-file only; it's cross-browser - works in every major browser; also, it works in Internet Explorer 6 (where it uses an iFrameShim so that it stays above select controls); it looks good and it's easily customizable through the style sheet file; offers an intuitive interface for users to navigate fast and easily through months and years; offers an intuitive mechanism for disabling dates and date ranges through a syntax similar to cron syntax; supports defining of custom weekend days for countries that don't have the weekend on Saturday and Sunday; supports most of date formats you can think of, borrowing the syntax from PHP's date function; supports future-only or past-only calendars; supports internationalization
