<b>Email</b>	{value_email}

PHP script used to display other's news on your site. It reads, caches and then displays remote RSS (RDF) files. Supports RSS 0.9, 0.9x, 1.0, 2.0 and you can customize through it's templates the appearance on the site, including: channel name, channel link, channel description, channel image (logo), news link, news title, news description, news publication date, if available. It has an administration panel to add/remove feeds and supports OPML subscription list importing/exporting. Also displays wml content for WAP devices.
