

Zip Cart - AJAX Zip File Download Cart

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Written as a PHP5 class to scan through folders and powered by AJAX utilizing JQUERY . This app allows the user to quickly specify which folders they want to display, then zip cart will scan the folder(s) and display all the items inside and make the files available for preview / cart queue / download. The end user will visit your site with zip cart installed, preview your files then add a chosen file to their cart. They have the ability to continue doing this until they are ready to download, then with one click your user will be able to download a zip file of the files they have chosen. It's that simple. Comes with a default CSS styling, but you can easily change it to fit your site. Perfect for freelancers, photographers, small business owners, anyone who wants to offer simple, beautiful file downloads to their users.
