Aardvark Topsites is a powerful Perl topsites script. It includes many features such as counting pageviews, hits in, and hits out, multiple pages, a search engine, member login, lost password retrieval, and an easy-to-use web-based admin area. You can also put member's ranks on the buttons. Almost all output from the script can be changed by editing simple HTML templates. No need to muck around in .cgi files to change how it looks.
