

Accessing MySQL Database with ASP.NET

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This step-by-step tutorial makes use of over 20 images to describe every step in detail from obtaining, installing, configuring and running MySQL on Windows to installing/uninstalling MySQL as a Windows service, creating a new table, populating it with some records and displaying those records in an ASP.NET page. Also explains the advantages of using MySQL on Windows with ASP.NET. All the code is available for download.
