

Add authentication to your PHP pages the easy way

Address {value_address}

Contact Person{value_contact_person}Mobile Number{value_mobile_number}

Email {value_email}

This will enable you to add a login prompt that authenticates a user before he can see a page. No need to modify your code or pages. Simply download a file, and add a single line at the top of the page you want to add a login to. Any feedback is appreciated.
