

Advanced Content Manager Magento 2 extension

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

ACM for Magento 2 web store assists administrator to create a variety of content types, eg. portfolio, testimonial, gallery, news, lookbook... conveniently and effectively. Similar to creating attribute sets for the product on a store, this extension facilitates you to make different content types using available data fields. Once you have created a content type, the extension will automatically generate a page without you having to setup a certain CMS page for it. ACM does help administrator to create many other custom forms. As far as you can see, the default contact page in Magento cannot meet your demands since you have to add more fields to the form to turn it into a friendly-looking but working form. You are not a developer yourself so life seems not to be easy then. Forget about this limitation because our advanced Content extension is far beyond what you thought possible.
