

Ajax Tutorial with Prototype

Address {value_address}

Contact Person{value_contact_person}Mobile Number{value_mobile_number}

Email {value_email}

This is an example of a good use of Ajax, and at the same time keeps it simple. It is a zip code verifier. As soon as the person enters the zip code it makes a request to the server to see if the zip code is in the database, and returns the city and state.
