

Ask Visitor for Name Script

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Personalize your web page with this very simple paste-it-in script that asks the visitor for his or her name when entering your page, then prints a "Hello" welcome message anywhere you wish in the body of the page. (If the visitor does not type in a message, a default message shows, instead.) Very easy install for JavaScript newcomers.
