Mobile Number	{value_mobile_number}
Email	{value_email}

ASP.Net Project FTP is a utility that allows you to easily upload an ASP.Net 1.x or 2.0 project to any arbitrary FTP site. It works similar to the "Project/Copy project..." command in Visual Studio, but does not require FrontPage extensions and it allows you to upload only the selected files you want. ASP.Net Project FTP also remembers all projects, FTP sites, user names, passwords and which files have been updated since the last deploy. Note that it saves this information in an XML resource file in the same directory as your executable and it saves the passwords in clear text.
