ALGrid - web-control that displays the values of a data source in a table where each column represents a field and each row represents a record. The ALGrid control allows you to select, sort, group, insert, filter and edit these items. ALGrid can empty show and upload an image without any additional handlers. Build-in validators help you to validate a column values. The control has rich set of column types. ASP.NET AJAX supports and rich client side API.
