We, at Biztech, provide an opportunity to add yet another feature to the online merchant's Magento Store! You can add Australia Post Shipping feature to your store! Developed to offer enhanced functionality to the online merchants, this extension is equipped with various features, to add value to the e-stores and offer enhanced buying experience to the customers. Integrating this tool, a new shipping tool - "Biztech Australia Post" appears under the 'Shipping Method' section of the admin panel! Now the admin (merchant) needs to fill data i.e., API key and other information required to integrate this shipping process. Once this extension is installed, the merchant needs to manually bind the three major attributes (properties) length, width, and height used in this extension with the relevant length, width and height that is available in the store to identify the product.
