Bennie Webdesign Guestbook

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Use this easy to configure script to run as many guestbooks as you want. Every guestbook is secured with a password and can use a different layout and title. You can change the layout online for every guestbook (providing you have the password) so you don't have to edit the cgi file everytime but only once. There are only 4 variables you must edit before you can run the program.
