CFSecurity_Framework

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

CFSecurity_Framework is a powerful and secure login system for your ColdFusion website. CFSecurity enables you to create a login system that allows users to log into your website. CFSecurity allows you to create users and security levels and then assign users to those security levels for as much as security as you need. CFSecurity has the ability to not only secure the complete page but parts of the pages as well depending on your security level. For example: You may have a page that you want anyone who is a member of the "Users" group to only see the top of the page but anyone who is a member of the "Administrators" ; ; group can see the whole page. You can get as creative as you wish. Easily add a login framework around any of the pages within your site! NEW Version 1.4! Added security features and MUCH MORE!
