Mobile Number	{value_mobile_number}
Email	{value_email}

CFX_JSpellCheck allows ColdFusion developers to build custom front ends (or use the supplied front end) for checking spelling in web applications. The Spell Checker allows you to Pass in a word, or paragraph of words, and it will check the spelling of all the words, and return a data structure of misspelled words, and their suggestions. The spell checking is done server side Via a CFX Tag written in Java, so there are no Java Applets, or ActiveX controls to deal with. The example spell checker interface provided is written in HTML and JavaScript and works on 4+ browsers.
