

contacts.droid

Address {value_address}

Contact Person{value_contact_person}Mobile Number{value_mobile_number}

Email {value_email}

"Lookup the user's addressbook for numbers, mail addresses, as well as chat and Twitter usernames and get information about the contact back easily. No more dealing with cursors and SQL-statements. It's all done with a few lines using contacts.droid. Working for Android 2.0+."
