<b>Email</b>	{value_email}

System to manage your module-border containers, which were introduced as of DNN ver 1.0.8. Visually adjust Color, Alignment, and Border settings within your browser. Almost no postback events occur while editing/browsing your container database Containers can be applied to your portal the same way as when editing a modules settings (Global or Default). You may also after making adjustments to a container, get the past-able text so you may apply the container to a particular module. Containers are stored for each portal, in that particular portal's upload directory, under the "Containers" sub-folder. Each container gets it's own folder, so as to avoid conflicting image names. Container images may be zipped and then uploaded, very-much like installing a zipped-module
