A counter is based on the client-server model. It should only on the home page automatically generated source code is copied and inserted on your home page. The rest is done [www.counter.gd](http://www.counter.gd). The following values are represented: - Domain - Visitors to time on-line (in the last 5 minutes) - Visitors today - Visitors in the last 30 days - Visitors total - Last impression (date and time) - Impressions in the last 30 days - Impressions total - Display of the visitors of the last 30 days over bar chart - Display of the side calls of the last 30 days over bar chart For Joomla / Mambo: You have to fetch only a Counter-ID from [www.counter.gd](http://www.counter.gd), download & install the module and register the Counter-ID under attitudes. The module offers different attitudes (like representation of the counters, button style etc.). Your statistics is available thereafter over a Button (a picture on your Web operational readiness level appears).
