

# Documentation Enhancer for Java

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

A tool that enhances Javadoc documentation files with semantic information. The product's operation can be divided into three phases: Information from the original Javadoc files is processed and stored in XML files. Static analyses are performed on classfiles and its results are stored in XML files. XSL transformations are applied on the XMLs generated in stages 1 and 2, re-creating the Javadoc look-and-feel with the analysis results added.
